- Good progress on items committed in the last sprint.

Some suggestions for further work:

- **Trading Service** – get latest prices via API, open/close, high/low, buy stock.

- **Email Notification on transactions**

- **H2 DB Connectivity**, explore the use of Hibernate as an ORM for managing database connectivity.

- **Further examine the flow**, eg at what point does the user select what account they want to create, and what values they need to provide to us.

Note: Ensure that everyone is using the same version of SDK to prevent any issues in the future when pulling, compiling etc
